

ONTARIO'S SPECIALISTS IN TANK CLEANING

- When heavy metals and chemicals accumulate inside storage vessels...
- When dense chemical sludges build up on tank floors...
- When layers of hazardous deposits and scale form on the walls of vats...

This demands periodic removal of waste and contaminants from industrial storage equipment

"ONE STOP"

FOR SAFE, EFFECTIVE STORAGE VESSEL CLEANING

With our equipment, we can provide the safe and reliable movement of materials from storage tanks that need product moved prior to being cleaned. With our highly trained staff and a complete range of trucks and equipment, Aqua Fast Flush delivers timely, safe and thorough product recovery and transfer services to your operation.

One call is all you need for complete professional cleaning of industrial storage tanks, vats and vessels. Our extensive mobile cleaning fleet and certified crews bring all the tools and skills to help you prepare for inspections, repurposing or sale of all industrial storage facilities.

- Our extensive ECA allows us to move nearly any waste class.
- Highly trained technicians, industry-certified for confined-space and hazmat applications.
- State-of-the-art hot water flushing rated to 5000 psi to cut through oil, grease, scale and other deposits.
- Wet vacuum cleaning for extraction of liquids, semi-solids and tank bottom sludge with varied viscosities and densities.
- Dry vacuum cleaning operations for removal of sand, grain, coal, coke, alumina ore, fly ash, resins and dozens of other materials.
- Disposal offsite to approved facilities using 40,000 liter self-loading tanker truck
